PROGRESS & PITFALLS: Business Students and Library Collaboration

Jill Dixon & Colleen Hailey
Binghamton University Libraries

SURVEY METHODOLOGY & RESULTS

FIRST STEPS

The Approach
MBA accounting students approached the Libraries to be their “client” for their elective Marketing class. Jill Dixon, Science Library Coordinator, and Colleen Hailey, Business Subject Librarian, agreed to represent the Libraries.

First Meeting
The students discussed their proposal to seek a correlation between study time in the Libraries and course grades. Librarians Dixon and Hailey felt dubious about the theme.

Back to the Drawing Board
The proposal is evaluated by the Libraries and their Marketing professor as being difficult, time consuming, complex, and not the type of information needed to improve library services.

Second Meeting
Students met with Librarians Dixon and Hailey to revise survey. Librarians discovered that students have little knowledge of library services or resources. Students refined survey to provide a “better understanding of the typical user and his or her perceptions of Binghamton University Libraries.”

Why Students Use the Libraries

Survey Questions
• For what purpose do students use the Bartle Library, Science Library, or the Libraries’ website?
• To what degree are students satisfied with library services?
• Are there significant differences between frequent users of online services or users of other library services?

RESULTS

Survey Distribution
200 paper surveys distributed at 4 campus locations over a 2-day period, resulting in a 50% return rate.

LESSONS LEARNED FOR FUTURE COLLABORATIONS

• Students have a lack of understanding of library services and resources, which can impede the development of a questionnaire.
• The MBA students were fonts of misinformation.
• Surveys need to be focused—students have a hard time figuring out what services to evaluate or may pick unrealistic topics.
• The Library should have a good idea before meeting with the students what areas they want to be evaluated. Our marketing survey was too general.
• Students respond better to fellow students when filling out surveys.
• The MBA students had a high return rate especially considering they used paper surveys.
• Surveys may be distributed more widely when done by students.
• The surveys were handed out in places that the Libraries ordinarily do not go, e.g., dining halls and during a basketball game.
• Even MBA students may have no background in marketing surveys.
• Especially non-Marketing majors. Some results had to be discarded due to survey design problems.
• ...Or number crunching statistical programs.
• Our students titled this part of their report “The Coding Nightmare.”
• Collaboration is key.
• It is a delicate process, as you cannot write the assignment for the students or tell them exactly how to do it.
• Have meetings. Lots of meetings.
• We only had two initial meetings with the students, but wished that we had more. It is hard to coordinate meetings with busy MBA students.
• Have the students do a presentation for interested library staff.
• And do proofread the final report—ours had some statistical anomalies.
• Enjoy the process and a different way of connecting with Business students.
• One of the MBA students changed his minor to Marketing after this class assignment. They all learned a lot about the Libraries’ Services.
