BACKGROUND: The amount of support provided to people with disabilities in America today may be growing, but it is not enough for them to live comfortably in their own country. In comparison with a non-disabled person, the expenses associated with a disability can be more than ten times higher. Currently, I am investigating the possibility of using a universal basic income to enhance existing disability support programs. Research has been conducted on the subject of how we can acknowledge equality without compromising the individuality of people—a key dilemma in the field. Moreover, disability advocates believe that people should be able to guard their own well-being within the limits of their abilities and functions, and that they should also have the right of freedom.

# **METHODS**

- 1. Read Scholary Articles and books
- 2. Analyze disabilities rights and government support services
- 3. Interviewing those who are atctivel involved with people with disabilities.

### Limitations

- Doesn't take into account every individual's unique disability and the services they require.
- Does not properly address all of the disadvantages encountered directly by persons with disabilities (in other words, to define the extent of disability in its social model sense),

# Would basic income help or harm disabled Americans?

# **RESULTS**

It is certain that universal basic income has some benefits for people with disabilities, but since the average person does not have to face such a number of uncounted difficulties as people with disabilities do, unless the UBI is adjusted to take into account the disabilities individuality, it will not be as effective. As a result, Universal Basic Income (UBI), which is meant to provide a base equal income to all, is actually supposed to be adjusted to accommodate those with disabilities, takes away the universality of UBI, which offers equal income to all. Furthermore, social security services would be eliminated because government policies require them to not make a certain amount of money to keep those benefits. The elimination of social security services for those receiving UBI could have dire consequences for individuals with disabilities. Without the support of these services, they may struggle to access necessary healthcare, assistive devices, and other essential resources that are crucial to their well-being and quality of life. This could further exacerbate the inequalities and challenges they already face, undermining the intended goal of UBI, which is to provide equal income and support for all.

## Why it matters

Through this research, I could demonstrate why people with disabilities need more financial assistance. I could also show other people what they go through on a daily basis, and encourage more change and support for people with disabilities and their families.
